

The fleet, the lease, the lessee, and the loss. One system you can defend, **updated the moment the market moves.**

Lessor risk today is spread across spreadsheets. IFRS 9 in one workbook, stress models in another, lessee notes in email, jurisdiction precedent in someone's head. AeroInsights brings it into one workspace. Portfolio monitoring, scenario stress, counterparty credit, and live market signals all work off the same data, with an in-platform AI analyst on top.

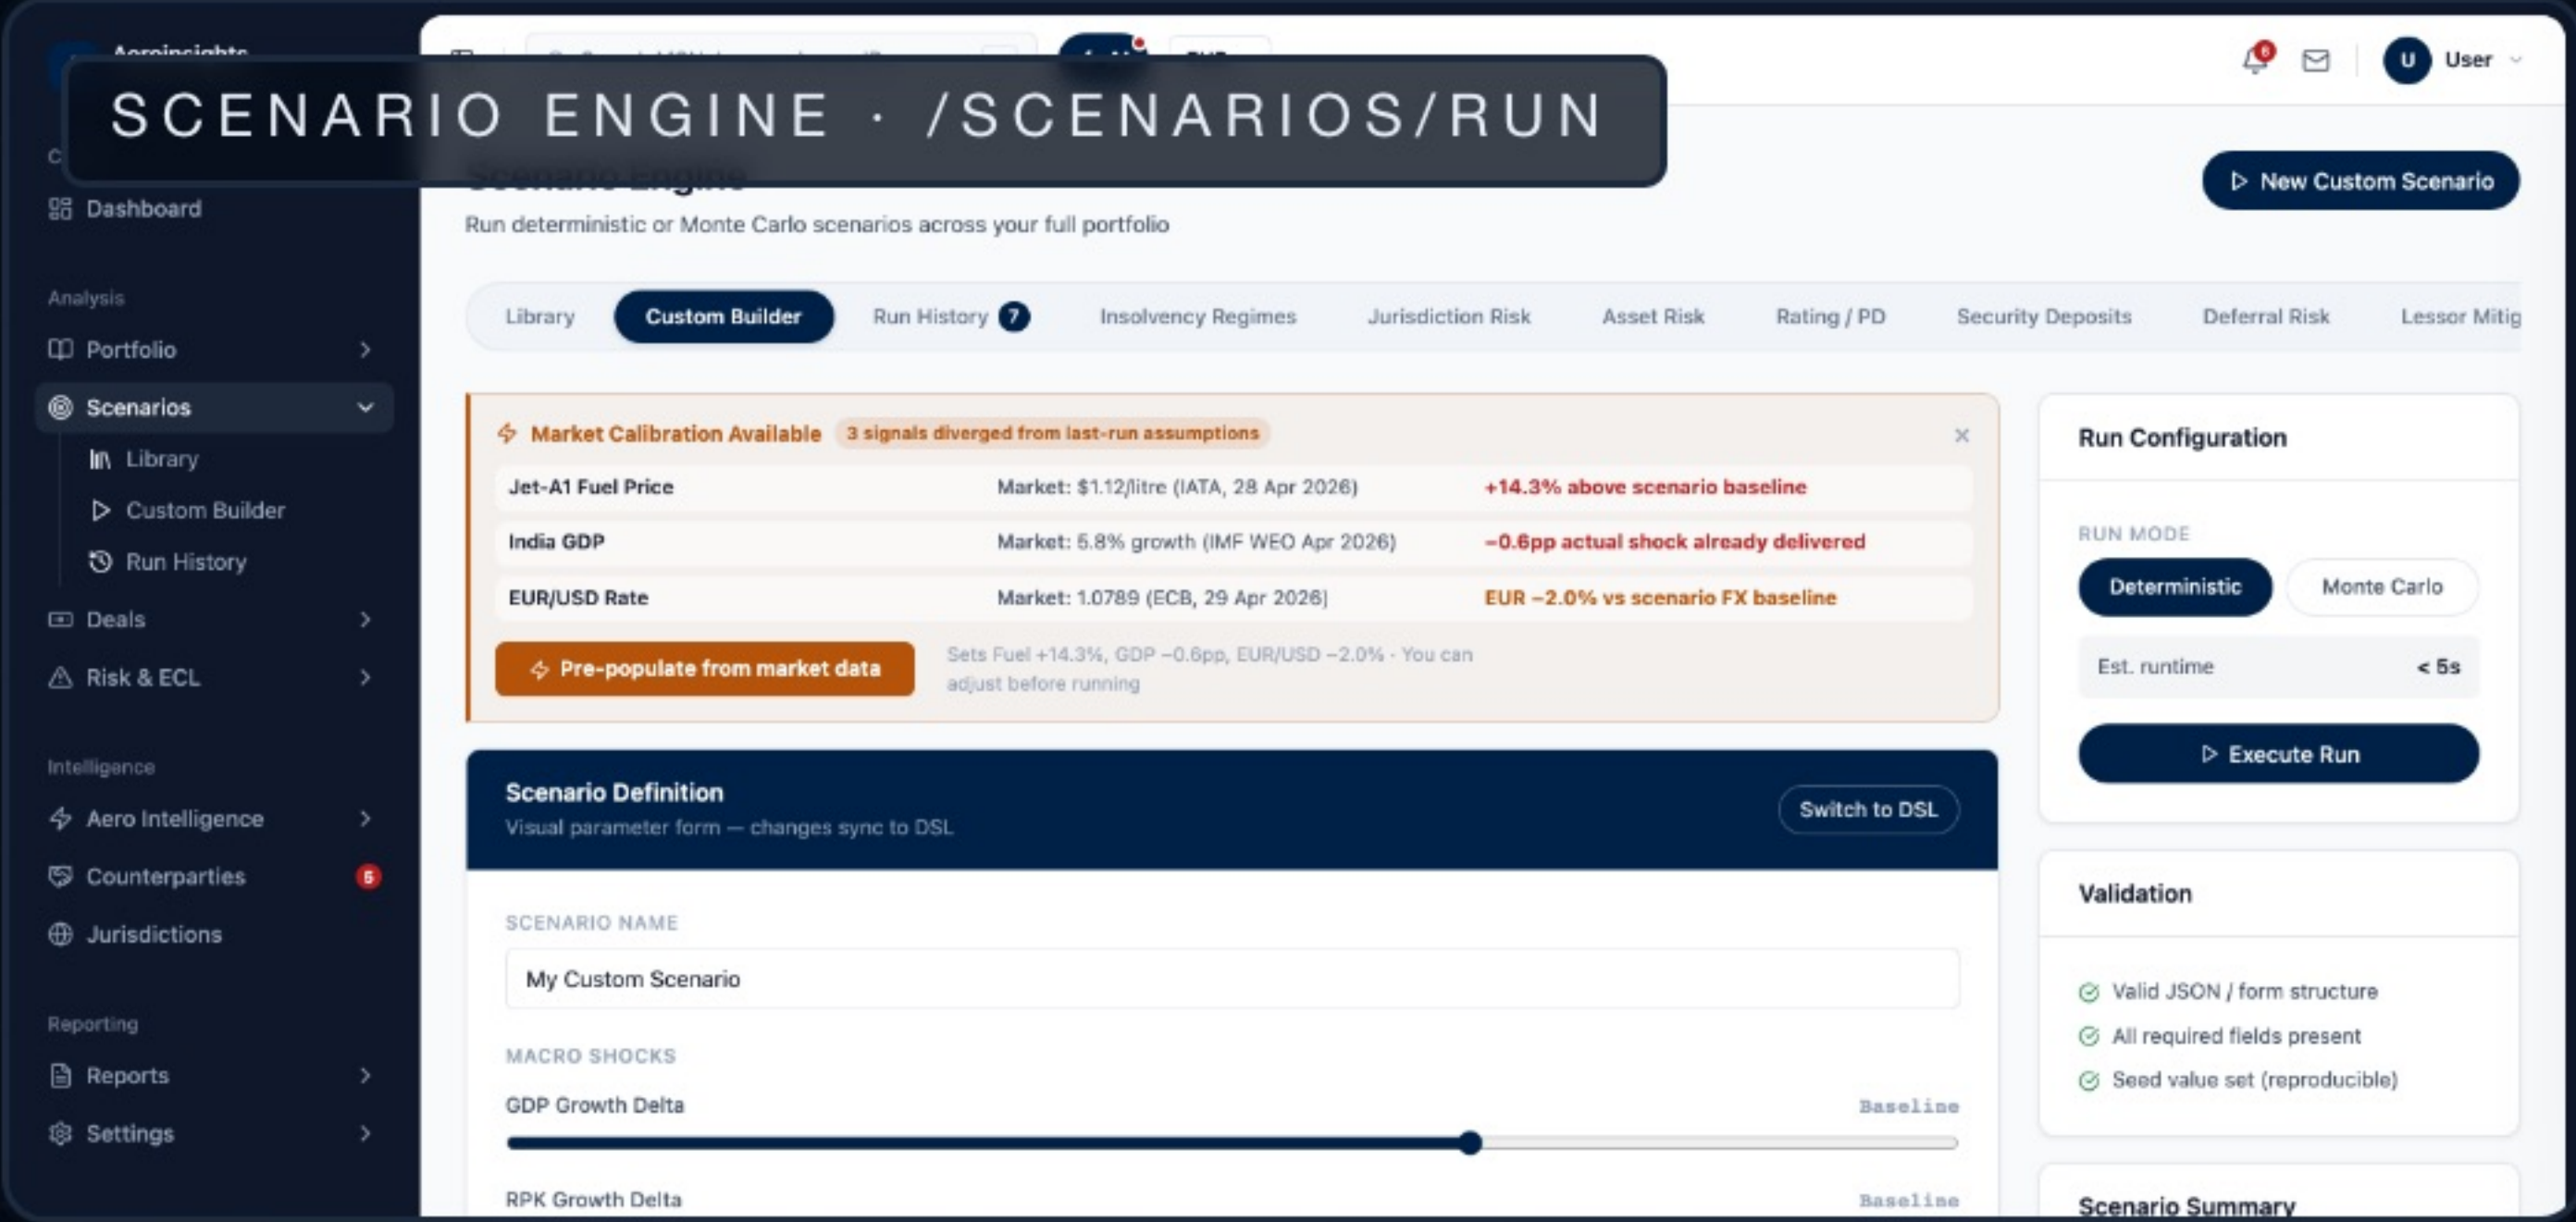

MODULE 01 · PORTFOLIO & ECL MONITORING

One live view of book value, weighted ECL, and the lessees moving against you.

Aircraft-level book value, IFRS 9 12-month and lifetime ECL, Stage 1/2/3 distribution, watchlist tier, and concentration risk by lessee, country, region, aircraft type, vintage, and currency.

- **Live market signals** from Jet-A1, IATA RPK, IMF WEO GDP, and ECB FX baskets. Flagged automatically when they drift from your last scenario run.
- **Audit-ready snapshots** with full evidence chain. Stage migration history, IAS 36 impairment triggers, point-in-time PD and LGD.
- **Aero Intelligence assistant** embedded in every view. Ask it to explain a number, summarise a lessee, or draft a board paragraph.

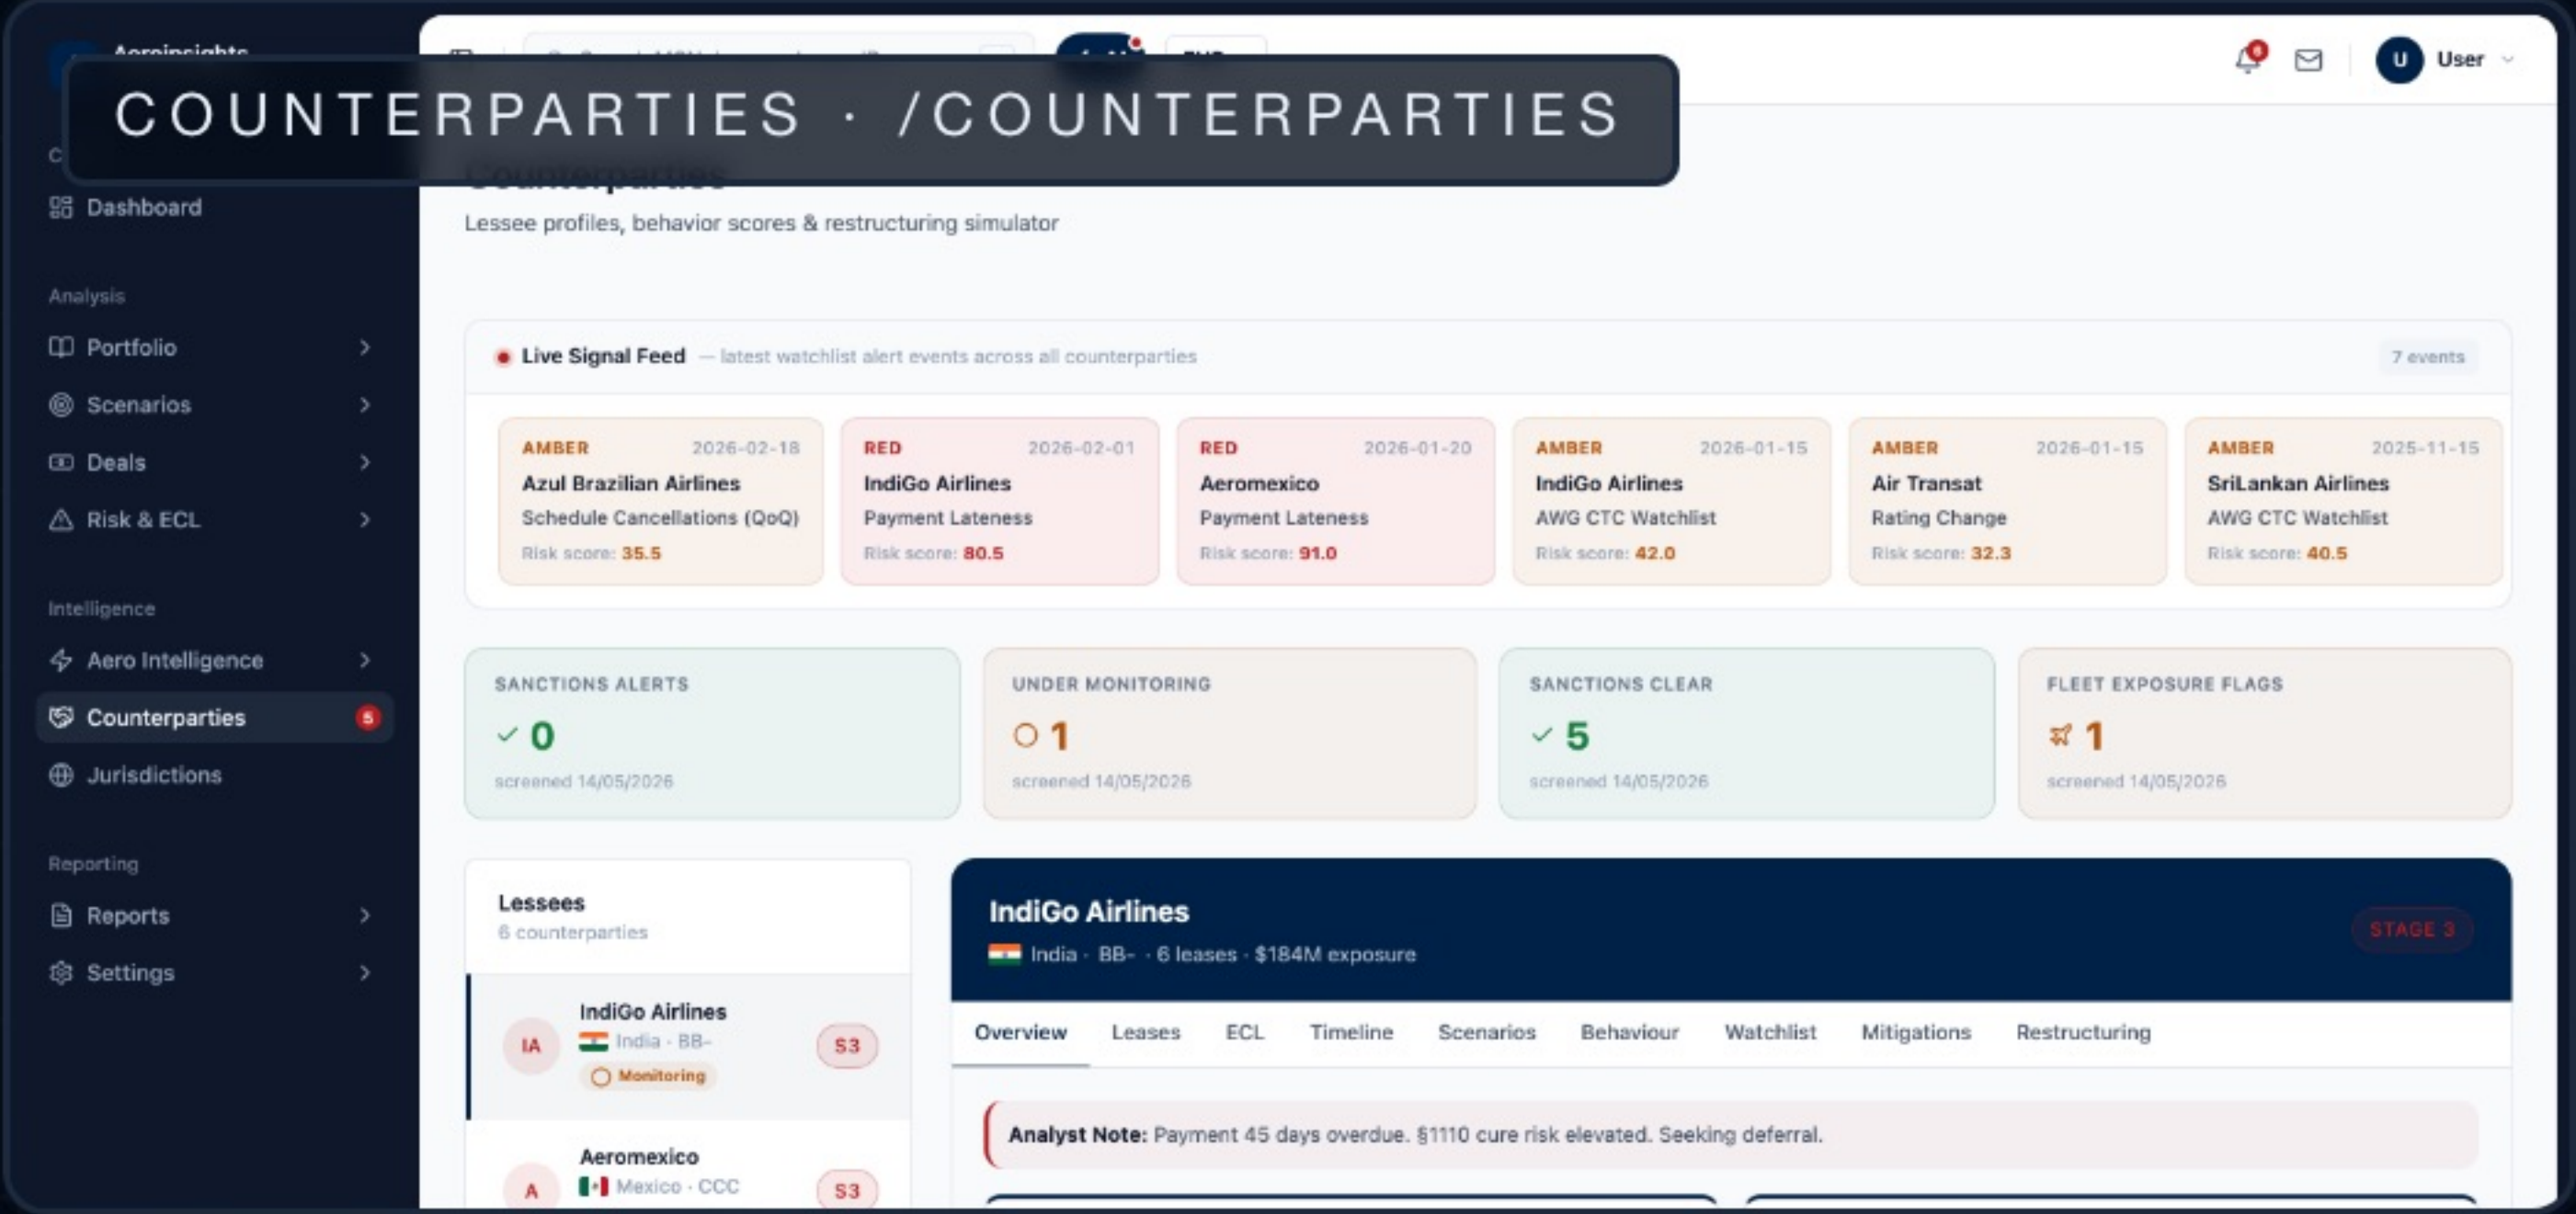

MODULE 02 · SCENARIO ENGINE

Stress every lease against any mix of macro and credit shocks. Deterministic or Monte Carlo.

Built-in macro shocks for GDP, RPK, fuel price, FX basket, interest rate, aircraft market value, and asset depreciation. Restructuring presets cover Standstill, Rent Reduction, Equity-for-Debt, and Write-off. Each one is tied to jurisdiction-aware LGD overlays for Chapter 11, India IBC, Mexico Concurso, Brazil RJ, and Indonesia PKPU.

- PROBABILITY WEIGHTS 60·25·15
- TORNADO & SENSITIVITY
- AUDITOR EVIDENCE PACK

MODULE 03 · LESSEE INTELLIGENCE & CREDIT

Every lessee, scored. A restructuring simulator that prices cooperative versus adversarial workout paths.

Behavior score, days-overdue, watchlist tier, credit rating, and PD estimate are edited inline. The fleet sanctions tracker, CTC coverage breakdown, and deposit and maintenance-reserve coverage feed a restructuring simulator. It values each lever against repossession timeline, remarketing lag, and payment-behaviour mix.

BUILT FOR

Decision-makers across the lessor stack.

- Aircraft lessors, from mid-cap through to top-10 by NBV
- Aviation finance desks at banks & ECAs
- Risk, ALM and treasury inside lessors
- External audit & IFRS 9 / IAS 36 compliance teams

BUILT AROUND YOU

The platform bends to your firm, not the other way round.

ECL parameter sets, scenario libraries, watchlist logic, LGD overlays, report templates, and export packs are all configurable per firm. **New modules, custom data feeds, and features cloned from tools you already use can be built in.** If it sits inside the lessor risk workflow, we can build it, change it, or remove it. Fast.

Engineered in Dublin against the IFRS 9 and IAS 36 frameworks already in use by the global lessor community. Calibrated against IATA, IMF WEO, ECB, and CTC Aviation Group precedent. In active conversation with risk teams at mid- and large-cap lessors. Demo access is available on request.
